

# Business Productivity Insights

Visibility into daily activity means leaders can better understand performance and productivity trends over time, using quantitative and qualitative data to better predict outcomes.

**One simple score and an easy to use dashboard to support flexibility and ensure peak performance.**

Using ML and AI, we measure thousands of daily activity points across your core business applications to generate actionable insights, digestible in seconds, so leaders can make well-informed decisions, rooted in data.

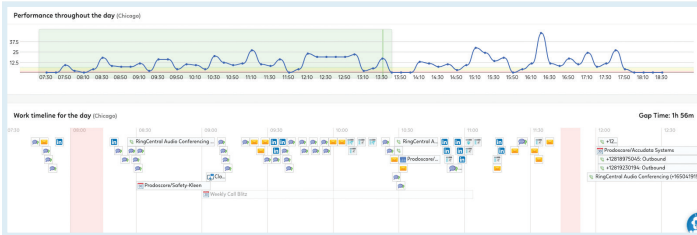

## Use cases:

- Save huge and invaluable amounts of time through automated data aggregation into your tech stack.
- A holistic view into individual, team, and department's productivity, right at your fingertips.
- Identify performance, activities, and trends for employees.
- Optimize and improve onboarding, plus better set new-hire expectations.
- Produce objective data and coaching opportunities to better understand contributions of top and bottom performers.
- Maintain aggregated data that will retain employee activity to mitigate surprise lawsuits down the road, after an employee leaves.
- Identify operational efficiencies and deficiencies for workload management.

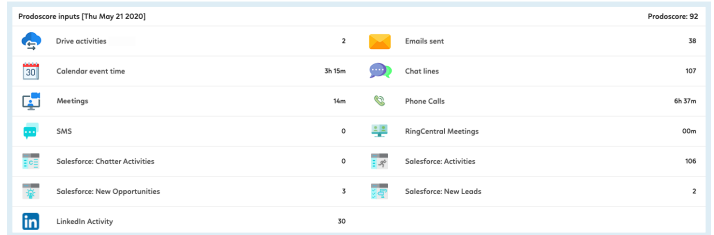

## Benefits:

-  **Visibility**  
Gain insight into levels of engagement to easily determine operational efficiencies, burnout, and underleveraged resources.
-  **Flexibility**  
Some employees are sure that they are more productive in one setting versus another, but how do you know? Empower your workers to work when and where it makes sense for them.
-  **Performance**  
Analyze your team's performance over time through automation to identify trends, coach towards consistency, and discover and clone best practices.
